DNA encounted gosteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 81; Page 169; 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CSph in which amino acids 298-380 of the mature protein have been deleted and replaced by Ser-Leu-Asp. These amino acid changes have been caused by the introduction of a restriction site. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 KD under reducing conditions and 120 KD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for bone resorption control, esp. treatment of osteoporosis.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CC in which amino acids 311-380 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 6 Nb under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg. C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and

                                                                   δλ
                                                                                                 g
                                                                                                                                   δy
                                                                                                                                               This sequence encodes a mutated version of the full length ostepolastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes a mutated version of 5131 is substituted with Leu and mino acids 373-380 of the mature protein have been deleted. These amino acid changes have been caused by the introduction of a restriction site. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducting conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the provention of disorders of bone resorption, e.g. osteoporosis. Sequence 1182 BP; 376 A; 280 C; 266 G; 260 T;

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone rescription control, esp. treatment of osteoporosis claim 60; Page 143-144; 183pp; Japanese.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-CL in which amino acids 379-380 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-C22S in which the 22nd Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 39; Page 136-137; 183pp; Japanese This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-C23S in which the 23rd Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore
                                                                                                                                600
                                                                                                                                                                                                                             009
                                                                                                                                                                                                                                                                                                         999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               aacaaagaccaagatatagtcaagaagatcatccaagatattgacctctgtgaaaacagc 840

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 30; Page 133-134; 183pp; Japaneses.

This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-C20S in which the 20th Cys residue in the mature ociF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its extivity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gtttgcaaaagatgtccagatgggttcttctcaaatgagacgtcatctaaagcacctgt 480

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 27, Page 132; 183pp; Japanese.
This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-C19S in which the 19th Cys residue in the mature ocif protein is substituted by Ser. The OCIF of the invention has molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300

for bone resorption control, esp. treatment of osteoporosis claim 57; Page 142-143; 183pp; Japanese.
This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-DDD2 in which amino acids 233-326 of the mature protein have been deleted. The OCIF of the invention has a molecular protein have been deleted. The OCIF of the invention has a molecular neight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under neducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis. Sequence 984 BP; 313 A; 236 C; 212 G; 223 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              181 gtgtgcgcccttgccctgaccactactacacagacagctggcacaccagtgacgagtgt 240

sequence encodes OCIF-CDD2 in which amino acids 252-380 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 KD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis. Sequence 819 BP; 251 A; 198 C; 188 G; 182 T;

This sequence encodes mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-DCR1 in which amino acids 2-42 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g. osteoporosis.

for bone resorption control, esp. treatment of osteoporosis
Claim 54; Page 141-142; 183pp; Japanese.
This sequence encodes a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence encodes OCIF-DDD1 in which amino acids 178-252 of the mature protein have been deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121 tgtgacaaatgtcctcctggtacctacctaaaacaacactgtacagcaaagtggaagacc 180

Statistics: Mean 14.688; Variance 38.315; scale 0.383

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for pure forecolastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis for bone resorption control, esp. treatment of osteoporosis.

This page 113-114; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoporasis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DDD1 in which amino acids 178-252 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto action-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the contion of disorders of bone resorption, e.g.

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 59; Page 115-116; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DDD2 in which amino acids 253-326 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. or 30 mins at 56 deg.C, and is lost after 10 mins at 70 deg.C. ocif is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for bone resorption control, esp. treatment of osteoporosis
Claim 53: Page 111-113; 183pp; Japanese.
This sequence represents a mutated version of the full length
osteoclastogenesis inhibitory factor (OCIF) of the invention. This
sequence represents OCIF-DCR4 in which amino acids 123-164 of the
mature OCIF protein are deleted. The OCIF of the invention
has a molecular weight by SDS-PAGE of 60 Bounder reducing conditions
and 120 kD under non-reducing conditions. The protein is adsorbed onto
cation-exchangers or heparin and its activity is lowered after 10 mins
at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins
at 70 deg.C. OCIF is useful in the control of bone resorption and therefore
in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption;

for bone resorption control, esp. treatment for osteoporosis

Claim 47; Page 107-109; 183pp; Japanese.

This sequence represents a mutated version of the full length
osteoclastogenesis inhibitory factor (OCIF) of the invention. This
sequence represents OCIF-DCR2 in which amino acids 43-84 of the
mature OCIF protein are deleted. The OCIF of the invention
has a molecular weight by SDS-PAGE of 60 bunder reducing conditions
and 120 kD under non-reducing conditions. The protein is adsorbed onto
cation-exchangers or heparin and its activity is lowered after 10 mins
at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins
at 70 deg.C. OCIF is useful in the control of bone resorption and therefore
                                                                     Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption; osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mutated OCIF, OCIF-DCR3. NA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 50. Page 109-111; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR3 in which amino acids 85-122 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto action-exchangers or hepzin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The Section of the second statement of osteoporosis for bone resorption control, esp. treatment of osteoporosis for bone resorption control, esp. treatment of osteoporosis for bone resorption control, esp. treatment of osteoporosis for sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-DCR1 in which amino acids 2-42 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-APR-1997 (first entry)

Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption; osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 6; Page 62-64; 183pp; Japanese.
This sequence represents the mature osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-PAGE 0f 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C. and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Osteoclastogenesis inhibitory factor; OCIF; heparin; bone resorption;

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 80; Page 126-128; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-Cabst in which Gln 371 is substituted by cleu and amino acids 373-380 of the mature OCIF protein are deleted. These changes are caused by the introduction of a restriction site in the DNA encoding this protein. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 70 deg.C. OCIF is useful in the creatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 6.2 Page 117-119, 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-CL in which amino acids 379-380 of the mature OCIF protein are deleted. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.

DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis for bone resorption control, esp. treatment of osteoporosis.

Idaim 32. Page 96-98; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C20S in which the 20th Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto action-exchangers or hepzin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis Laim 29. Page 94-96; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents offer-C19s in which the 19th Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto extion-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the control of sorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    22-APR-1997 (first entry)
Mutated OCIF, OCIF-C19S.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C23S in which the 23rd Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 Mo under reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the control of bone resorption of eg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C22S in which the 27nd Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 70 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mutated OCIF, OCIF-C21S.

Note that the conding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis claim 35; Page 99-100; 183pp; Japanese.

This sequence represents a mutated version of the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. This sequence represents OCIF-C21S in which the 21st Cys residue in the mature OCIF protein is substituted by Ser. The OCIF of the invention has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA encoding osteoclastogenesis inhibitory factor protein - useful for bone resorption control, esp. treatment of osteoporosis Disclosure; Page 64-66, 183pp, Japanese.

This sequence represents the full length osteoclastogenesis inhibitory factor (OCIF) of the invention. The OCIF has a molecular weight by SDS-PAGE of 60 kD under reducing conditions and 120 kD under non-reducing conditions. The protein is adsorbed onto cation-exchangers or heparin and its activity is lowered after 10 mins at 70 deg.C or 30 mins at 56 deg.C, and is lost after 10 mins at 90 deg.C. OCIF is useful in the control of bone resorption and therefore in the treatment and prevention of disorders of bone resorption, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                22-APR-1997 (first entry)
Full length osteoclastogenesis inhibitory factor.

New virulence plasmid pkDSC50 - provides DNA fragment useful as probe for detecting Salmonella Disclosure; Fig 2: ppp; Japanes Disclosure; Fig 2: ppp; Japanes Fig 2: ppp; Tapanes Fig 2: protein may be transcribed from the second reading frame of the "mba" fragment of virulent plasmid pkDSC50 from nucleotides 2564-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnosis and treatment of leukaemias, partic, acute lymphoblastic or nonlymphoblastic leukaemia Calaim 53; Page 134-135; 207pp; English.
Monoclonal antibodies which bind to at least part of the chimeric ALL-L/AR-17 protein (R66450) or to part of the AR-17 protein (see R66460 and R66461) are claimed. The antibodies are useful for diagnosing acute lymphoblastic and non-lymphoblastic leukaemia.
                                                                                                                                                                                                                                                   AF-17 protein, N-terminal region with similarity to peregrin. Acute lymphoblastic leukaemia, chromosomal translocation, abnormality, detection; chimeric ALL-1/AF-17 protein; ALL-1 fused gene on chromosome 17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 R23005;
29-OCT-1992 (first entry)
Protein transcribed from the mba sequence of plasmid pKDSC50.
Virulent; Salmonella choleraesuis; mouse bacteremia; Salmonella.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Canaani E, Croce C;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human tumour suppressor gene, HTS-1 - shows differential expression in tumorigenic and normal cells and may be useful in tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      prognosis
Column 19-26; 17pp; English.
Human tumour suppressor protein HTS-1 (R90766) is produced by
Procaryotic or eucaryotic host cells transformed or transfected by
Procaryotic or elcaryotic host cells transformed or transfected by
a vector including an isolated HTS-1 cDNA (T12473). Expression of
a vector including an isolated HTS-1 cDNA (T12473).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HTS-1 is associated with tumour suppression. The purified HTS-1 protein can be used to raise antibodies for use in HTS-1 detection. Sequence 1137 AA,

The receptor binds to TNF, and in particular, TNF-beta.

The receptor may be used for screening for antigonists and agonists of the receptor may be used for screening for antigonists and agonists be used to inhibit the growth of tumours, to stimulate cellular differentiation, to mediate the immune response and anti-viral response, to regulate growth and provide resistance to certain infections. The antagonists may be used therapecutically, to treat auto-immune diseases, inflammation, septic shock, to inhibit graft-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               03-JAN-1997 (first entry)
Daunofrubicin 14-hydroxylase.
darA; doxorubicin: biocorubersion; anthracycline; antitumour therapy;
daunofrubicin 14-hydroxylase.
                                                                                                                                                                                                                       Gaps

claim 4; Page 15-18; 31pp; English.

The present sequence is that of the daunorubicin 14-hydroxylase, isolated from Streptomyces peucetius strain 29050. The enzyme converts daunorubicin to doxorubicin, an anthracycline used widely as an antitumour agent. A vector contg. the drxA gene (733617) could be used to transform a suitable host cell which produces daunorubicin, in order to enhance bioconversion of daunorubicin to doxorubicin. Bioconversion can be carried out either by using directly the free or immobilised transformed cells or by isolating the enzyme, which can be used in the free form or immobilised to resins, glass, cellulose or similar substances by ionic or covalent bonds, or graffed to fibres permeable to the substrate or insolubilised by cross-linkage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The continuation of fumonisin and related mycotoxin cpds. in grains response esp. an esterase, from Exophiala spinifera, which an enzyme esp. are abacterium Example 8; Pages 33-34; 54pp; English.

Example 8; Pages 33-34; 54pp; English.

The present sequence is the Exophiala spinifera (ATCC 74269) fumonisin esterase, which was isolated from a maize seed. The gene which encodes the esterase can be used to produce transgenic plants and genetically engineered microorganisms, capable of expressing the esterase. The microorganisms can be used as a problotic or feed inoculant, along with the esterase to degrade fumonisins and related cpds., partic. for the detoxification of maize seed pre- or post-harvest (i.e. during the storage or processing of the harvested grain, or in the processed grain)

including exons from two separate receptors, having improved growth performance in serum-free medium bisclosure: Fig 3: 57pp; English.

The amino acid sequence is that of the soluble insulin-like growth factor (IGF) receptor. It is used here as part of a fusion protein produced by a hybrid DNA insert comprising a DNA sequence encoding part of the extracellular domain of the IR and a sequence coding for part of the ECD of an insulin like growth factor (IGF). Cells contg. this insert have better growth characteristics in both serum-contg. and partic. Serum-free media. This makes them useful for expressing polypeptides (e.g. human blood clotting factors; tissue plasminogen activator; human protein C), encoded by a third DNA sequence. The polypeptides of an now be purified more easily and produced in better yield. See
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New hybrid cellular receptor - has 2 sequences encoding extracellular domain of receptors having different ligand binding extracellular domain of receptors having different ligand binding extracellular domain of receptors having different ligand binding Example 1; Fig 4; 97pp; English.

Example 1; Fig 4; 97pp; English.

The sequence was deduced from a cDNA sequence prepd. from mRNA isolated from human term placenta by PCR amplification. The full sequence was assembled from four subcloned fragments and was found to be identical to that published by Ullrich et al (The EMBO Ordinal 5(120), 1986, pp 2503-2512). The DNA can be ligated to DNA encoding a sol. insulin receptor (see Q14813) to prepare hybrid proteins. The new receptors are useful for screening for ligands of proteins. The new receptors are useful for screening for ligands for scalishing the 3-D structure of the ligand binding site and for designing analogues or functional equivalents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Mammalian cells contg, hybrid DNA for extracellular receptor including exons from two separate receptors, having improved frow two separate receptors, having improved size the performance in serum-free medium disclosure; Fig 4: 57pp; English.

The amino acid sequence is that encoded by a hybrid DNA insert comprising a DNA sequence encoding part of the extracellular domain of the IR and a sequence coding for part of the extracellular domain of the IR and a sequence coding for part of the ECD of an insulin like growth factor (IGF). Cells contg, this insert have better growth characteristics in both serum-contg, and partic. serum-free media. This makes them useful for expressing polypeptides (e.g. human blood clotting factors; tissue plasminogen activator; human protein C), encoded by a third DNA sequence. The polypeptides can now be purified more easily and produced in better yield. See also R14402.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PROC. NATL. ACAD. SCI. U.S.A. 89:1942.

PUNCTION: WAD SCI. U.S.A. 89:1942).

- 1 FUNCTION: HAS BE INVOLVED IN THE PHYSIOLOGICAL PROCESSES OF BRAIN
FUNCTION: HAS NO DIPEPTIDYL AMINOPEPTIDASE ACTIVITY. THE LACK OF
ACTIVITY MAY BE DUE TO THE SUBSTITUTION OF AN ASPARTARE RESIDUE
FOR THE SERINE RESIDUE IN THE PROPOSED CAPALYIC TRIAD.

- 1 SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (PROBABLE).

- 1 TISSUE SPECIFICITY: DEPX-S IS EXPRESSED IN BRAIN AND SOME
PERIPHERAL TISSUES INCLUDING KIDNEY, OVARY, AND TESTIS, IN
CONTRAST DEPX-L IS EXPRESSED ALMOST EXCLUSIVELY IN BRAIN
CONTRAST DEPX-L IS EXPRESSED ALMOST EXCLUSIVELY IN BRAIN
CONTRAST DEPX-L IS EXPRESSED ALMOST EXCLUSIVELY IN BRAIN
CONTRAST DEPX-L LOUGH AND SIGNER EXPLOSIVELY IN BRAIN
DOMAIN, BUT HAVE LONG AND SIGNET N-TERMINAL EXTRACELLULAR
DOMAIN, BUT HAVE LONG AND SIGNET N-TERMINAL CYTOPHASMIC DOMAINS

- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S9B; ALSO KNOWN AS THE
EMBL: M76426; 6408716; -

CC -!- FUNCTION. HAX BE INVOLVED IN THE PHYSIOLOGICAL PROCESSES OF BRAIN

CC ACTIVITY MAY BE DUE TO THE SUBSTITUTION OF AN ASPATATE RESIDUE

FOR THE SERINE RESIDUE IN THE PROPOSED CATALYTIC TRAD.

-!- SUBGELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (PROBABLE).

-!- TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN THE BRAIN. DPDX-L.

IS EXPRESSED EXCLUSIVELY IN THE BRAIN WHEREAS DPPX-S IS FOUND IN CC -!- ALTERNATIVE SPLICING. THE SEQUENCE

SHOWN HERE IS THAT OF THE LONG FORM (DPPX-S) AND A LONG FORM (DPPX-L).

CC -!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S9B; ALSO KNOWN AS THE PROLIC. SIMILARITY: BELONG TO PEPTIDASE FAMILY.

CC -- SIMILARITY: BELONG TO PEPTIDASE FAMILY S9B; ALSO KNOWN AS THE PROLIC. SHOWN HERE IS THAT OF THE LONG FORM (DPPX-L).

-!-FINCTION: MAY BE INVOLUED IN THE PHYSIOLOGICAL PROCESSES OF BRAIN
FUNCTION: MAY BE DIVED TO THE PHYSIOLOGICAL PROCESSES OF BRAIN
FUNCTION: HAS NO DIPEPTIDEL AMINOPEPTIDASE ACTIVITY. THE LACK OF
ACTIVITY MAY BE DUE TO THE SUBSTITUTION OF AN ASPARTATE RESIDUE
FOR THE SERINE RESIDUE IN THE PROPOSED CATALYTIC TRIAD.
-!- SUBCELLUAR LOCATION: TYPE II MEMBRANE PROTEIN (PROBBLE).
-!- TISSUE SPECIFICITY: EXPRESSED PREDOMINANTLY IN BRAIN.
-!- ALTERNATIVE PRODUCTS: A SHORT FORM (DPPX-S) AND A LONG FORM
(DPPX-L). ARE PRODUCED BY ALTERNATIVE SPLICING. THE SEQUENCE
SHOWN HERE IS THAT OF THE LONG FORM (DPPX-L).
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S9B; ALSO KNOWN AS THE
                                                                                                                                                                                                                                                                                                                                                                                                  EMBL, M96859; G306706; -.
